

SUPER SPRAY ADHESIVE

Thanks for purchasing our spray adhesive, if you've ever used spray contact adhesive before, you'll be able to tell the difference of ours vs the waered down 3M crap. This product can be used to adhere tolex, tweed and our super loop pedal board deck material.

How to use this product:

- First and foremost, use this product in a well ventilated area. Using a quality ventilator is highly recommended.
- The product works best when used on warm days, between 60-85 degrees.
- When adhering materials, make sure both surfaces are coated generously but not soaked.
- Allow the glue to dry (but not too much) to the touch before joining the 2 surfaces.
- After joining the areas together, it helps to use a J-Roller or similar to smash the two pieces together creating a strong and permanent bond.

OUR MOST POPULAR KIT IS THE PEDALBOARD DECK KIT: COMES WITH SPRAY ADHESIVE, RACK HANDLES AND YOUR CHOICE SIZE SUPER LOOP DECK MATERIAL
